

**Tutorial 05: CO 328**  
**Individual Work**  
**Deadline: 08th April 2020**

**Task:**

Select some good seeds from vegetables/fruits you bring home (pumpkin, cucumber, chillies, eggplant, papaya or any suitable ones, also you can take the roots of leeks, growing onions or garlic etc). Prepare suitable bed(s) to plant them and plant at least 5 seeds. I would like to see the progress of your plants by 8th April (initial delivery). Take pictures, prepare an one page pdf and submit. You may use any online material if you want. Make sure you do not use any chemical fertilizers.

Then you will have to maintain your plants according to their need (watering everyday and fertilize when necessary).

Aim: To make students sensitive about the environment, engage them in a physical activity and introducing a mind relaxing hobby for their busy carries. Introduce healthy food habits.

Following are some of my efforts:
