

CO544 – Lab 04

E/15/202

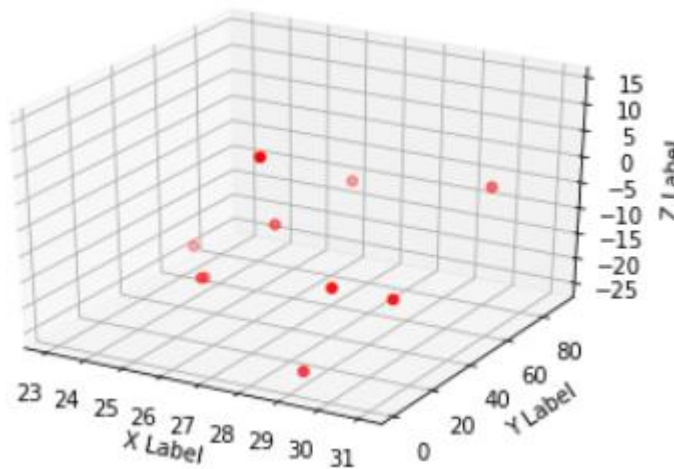

TODO 1:

`fig.subplots_adjust(hspace=1.0)`

In here `hspace` defines the amount of height reserved for space between subplots, expressed as a fraction of the average axis height. So in part(c) the above line makes 1.0 space between the 2 subplots.

TODO 2:

Normal

`ax.view_init(30, 30)`
